STUDYMATE

Promo Video Script

A simple English, 3-minute app demonstration for students, managers and administrators.

STUDENT	MANAGER	ADMIN

Before recording

Prepare three separate, verified accounts

1. Register and confirm three accounts from the app. Public sign-up creates Student accounts by design. Use accounts you control and do not show passwords in the video.

Set up the first Admin account

2. In Supabase Dashboard, open SQL Editor and run this after replacing the email with your verified Admin account email:

```
UPDATE public.profiles SET role = 'admin' WHERE email = lower('admin@example.com') AND role = 'student';
```

Confirm one row was updated. Sign out of StudyMate, then sign in with that account. Keep Admin assignment restricted to the project owner.

Make the third account a Manager

3. Sign in as Admin. Open **Manage student accounts** / **Accounts by role** and tap **Make Manager** on the verified second account. Sign out and sign in as that account to show the Manager dashboard.

Recording notes

- Deploy the latest GitHub commit to Render before showing online role controls.
- Use the app website or current Android APK; record in portrait at 1080p.
- Use sample course content. Hide email inboxes, personal details, passwords and all secret keys.
- Describe the Study Assistant as built-in study guidance; this build does not call a live AI model.

Scene-by-scene recording plan

Keep the narration calm and clear. The timings add up to about three minutes.

1. The problem | 0:00-0:15

ON SCREEN

Show the StudyMate logo, then a student opening the app on a phone. Briefly show a planner task and course materials.

NARRATION

"Have you ever missed a deadline, lost class notes, or wondered how a student is doing? Meet StudyMate, your smart study companion."

2. One app, three roles | 0:15-0:30

ON SCREEN

Show the login page, then the Student, Manager and Admin sign-in buttons or role labels.

NARRATION

"StudyMate brings students, managers and admins into one simple app. Each role has its own tools, connected in one system."

3. The Student experience | 0:30-1:15

ON SCREEN

Sign in as Student. Open course materials, an assignment and a quiz. Show the planner, custom focus timer and progress page. Briefly show the student directory and request control.

NARRATION

"Students can open course notes, submit assignments, and take quizzes. The planner helps them organize tasks. They can choose a focus time and check their progress. Students can find classmates from the same institution and control whether they accept friend requests. The built-in study assistant gives quick learning guidance."

4. The Manager experience | 1:15-1:50

ON SCREEN

Sign out and sign in as Manager. Show the Manager dashboard, create or open a material, assignment and quiz, then show student progress.

NARRATION

"Managers, such as teachers, can publish course materials, assignments, quizzes and announcements. They can review student submissions, quiz activity and scores from the Manager dashboard."

Scene-by-scene recording plan

5. The Admin experience | 1:50-2:30

ON SCREEN

Sign out and sign in as Admin. Show Accounts by role, promote a Student to Manager, open activity reports and settings, then show the recently connected panel.

NARRATION

"Admins can review accounts by role, search account activity, and manage system settings. The Admin can promote a verified Student account to Manager. The live panel shows who recently connected and which broad app section they opened. It does not show private messages."

6. Classmates and communication | 2:30-2:45

ON SCREEN

Return to Student. Show sending a friend request, then the friends or message screen. Use demo accounts only.

NARRATION

"Students can message a friend after the request is accepted. StudyMate also keeps course notices and learning tasks together in one place."

7. Closing | 2:45-3:00

ON SCREEN

Show the app on an Android phone, then a quick collage of all three dashboards and the closing logo.

NARRATION

"StudyMate helps students learn, managers guide, and admins stay informed. One app for everyday study. Let us take a closer look."

Before the final take

Prepare one sample material, one assignment, one quiz and a student account with progress data. Rehearse the sign-out and sign-in transitions so each role dashboard appears without exposing credentials.

Full narration - read-through

"Have you ever missed a deadline, lost class notes, or wondered how a student is doing? Meet StudyMate, your smart study companion. StudyMate brings students, managers and admins into one simple app. Each role has its own tools, connected in one system. Students can open course notes, submit assignments, and take quizzes. The planner helps them organize tasks. They can choose a focus time and check their progress. Students can find classmates from the same institution and control whether they accept friend requests. The built-in study assistant gives quick learning guidance. Managers, such as teachers, can publish course materials, assignments, quizzes and announcements. They can review student submissions, quiz activity and scores from the Manager dashboard. Admins can review accounts by role, search account activity, and manage system settings. The Admin can promote a verified Student account to Manager. The live panel shows who recently connected and which broad app section they opened. It does not show private messages. Students can message a friend after the request is accepted. StudyMate also keeps course notices and learning tasks together in one place. StudyMate helps students learn, managers guide, and admins stay informed. One app for everyday study. Let us take a closer look."

Accuracy note

Show only features that work in the current build. The Admin live panel reports a recent connection and broad app section; it is not a recording of every action. A real Admin role is assigned by the project owner in Supabase. A Manager role can then be assigned by the Admin panel.
