STUDYMATE

Promo Video Script

A detailed, easy-English walkthrough of the Student, Manager and Admin experience.

STUDENT	MANAGER	ADMIN

Before recording

Prepare three separate, verified accounts

Register and confirm three accounts from the app. Public sign-up creates Student accounts by design. Use accounts you control. Do not show passwords or email confirmation links in the video.

Set up the first Admin account

In Supabase Dashboard, open SQL Editor and run this after replacing the email with your verified Admin account email:

```
UPDATE public.profiles SET role = 'admin' WHERE email = lower('admin@example.com') AND role = 'student';
```

Confirm one row was updated. Sign out of StudyMate, then sign in as that account. Only the project owner should assign the first Admin role.

Make the second account a Manager

Sign in as Admin. Open **Manage student accounts** / **Accounts by role** and tap **Make Manager** beside the verified second account. Sign out and sign in as that account to show Manager tools.

Technical and recording checklist

- Apply pending Supabase migrations and wait for the latest Render deploy to show Live.
- Use the website or current Android APK. Record in portrait at 1080p and keep transitions smooth.
- Prepare sample material, assignment, quiz, announcement, and student activity so pages are not empty.
- Hide credentials and personal account details. Use calm speech and soft background music.
- The Study Assistant offers built-in study guidance in this build; do not describe it as a live AI service.

WHO SPEAKS IN EACH SCENE?

PRESENTER / NARRATOR Scenes 1-3

STUDENT Scenes 4-8

MANAGER Scenes 9-11

ADMIN Scenes 12-14

Each person reads the NARRATION under their scene. Presenter speaks from off screen.

Scene-by-scene recording plan

Target total: 9 minutes 40 seconds. Speak calmly. Keep the screen visible while each task is explained.

1. Opening: the study problem | 0:00-0:40

SPEAKER: PRESENTER

ON SCREEN

Start with the logo. Show a student opening StudyMate on an Android phone. Briefly show course notes, a task, and a study reminder.

NARRATION

"Think about a normal study week. A student has notes in one place, assignments in another, and reminders on a phone. Teachers need to know who has submitted work. Administrators need a clear view of the system. StudyMate brings these study tools together in one mobile-friendly app."

2. What is StudyMate? | 0:40-1:20

SPEAKER: PRESENTER

ON SCREEN

Show the login screen and the three roles. Move to the home page. Add simple labels: Student, Manager, Admin.

NARRATION

"StudyMate is a smart student assistant for learning and course management. It has three roles. Students use it to study and track their work. Managers, such as teachers, organize course activities. Admins review accounts and system activity. Each role sees its own workspace. In this video, I will show how the three roles use one connected app."

3. Account creation and sign-in | 1:20-2:00

SPEAKER: PRESENTER

ON SCREEN

Show registration fields without typing real personal information. Briefly show the email-confirmation step, then sign in. Switch between the three prepared verified accounts.

NARRATION

"A new user can register with a name, email, department, batch, institution, and password. The user confirms the email before signing in. For safety, a new account starts as a Student. The project owner assigns the first Admin. After that, the Admin can promote a verified Student to Manager from the account list. This keeps role access under control."

4. Student dashboard | 2:00-2:45

SPEAKER: STUDENT

ON SCREEN

Sign in as Student. Show the dashboard cards, bottom navigation, profile, and the main sections.

NARRATION

"Now let us look at the Student dashboard. The student can move between Home, Routine, Planner, Progress, Friends, and Profile. The dashboard gives a quick view of study activities. The Profile page holds the student details and notification preferences. A student can add a profile photo and choose whether to receive friend requests. The layout is designed to be clear on a phone."

Scene-by-scene recording plan

5. Course materials | 2:45-3:30

SPEAKER: STUDENT

ON SCREEN

Open the materials list. Choose a course item and scroll through its title, type, and description.

NARRATION

"Course materials are available in one place. A student can open a resource and see which course it belongs to. This helps students find notes and study guides without searching through multiple chats or folders. Managers add these resources for the class. When a new resource is published, students can open it from their study materials area."

6. Assignments and quizzes | 3:30-4:20

SPEAKER: STUDENT

ON SCREEN

Open an assignment and show its instructions and due date. Show the submission form. Then open a quiz, choose answers, and show the result.

NARRATION

"Assignments help students understand what work is due and what they need to submit. The student opens an assignment, reads the instructions, writes a response, and submits it. Next, the student opens a practice quiz and answers each question. The app records the attempt and displays the score. These activities give students a simple way to practise and show their work."

7. Planner, focus timer and progress | 4:20-5:15

SPEAKER: STUDENT

ON SCREEN

Add and cancel a planner task. Open the focus timer, set a custom duration, start and pause it. Show progress and completion counts.

NARRATION

"Students can use the Planner to add a task and keep study work organized. The Focus timer lets the student choose a session length, then start a focused study block. When the session ends, the student can take a break and begin another one. On the Progress page, students can review submitted assignments and quiz results. These tools help students plan, focus, and notice what they have completed."

8. Classmates and messaging | 5:15-5:50

SPEAKER: STUDENT

ON SCREEN

Open the classmate directory. Show a department filter and friend-request control. If two demo users are prepared, show accepting a request and opening the chat.

NARRATION

"Students can find classmates who use the same institution name. They can send a friend request, accept or decline requests, and choose to turn off incoming requests. Private chat is available after a friendship is accepted. This gives students a way to connect while keeping each user in control of who can contact them."

Scene-by-scene recording plan

9. Manager dashboard | 5:50-6:30

SPEAKER: MANAGER

ON SCREEN

Sign in as Manager. Show the dashboard counts for students, materials, assignments, submissions, quizzes and attempts.

NARRATION

"The Manager has a separate workspace for course tools. The dashboard summarizes student accounts and course activity, including materials, assignments, submissions, quizzes, and quiz attempts. A teacher can use this view to understand what has been published and whether students are taking part. Now I will show how a Manager adds course content."

10. Publish class activities | 6:30-7:20

SPEAKER: MANAGER

ON SCREEN

Create or open a material. Show assignment creation and quiz creation. Open the announcement form and send a sample notice.

NARRATION

"A Manager can publish course materials with a title, course, type, and description. The Manager can create an assignment, add instructions, and set a due date. A quiz can include questions, answer options, and the correct answer. The Manager can also send an announcement to students. These tools keep the main course activities together in the same app."

11. Review student progress | 7:20-7:55

SPEAKER: MANAGER

ON SCREEN

Open Student Progress. Show a sample student row with submission and quiz activity. Do not expose real student details.

NARRATION

"The Manager can review student progress from the progress page. It shows assignment submissions and quiz activity, including scores. This helps a teacher spot who has completed work and who may need more support. For the demo, use sample accounts and sample course data so no real student information appears in the recording."

12. Admin overview and account roles | 7:55-8:40

SPEAKER: ADMIN

ON SCREEN

Sign in as Admin. Show dashboard totals, recent registrations, and open Accounts by role. Search accounts and promote the prepared Student account to Manager.

NARRATION

"The Admin workspace gives an overview of accounts and recent system activity. The account list groups profiles by role and can be searched by name, email, institution, or role. The Admin can send a private notice to a selected account. The Admin can also promote a verified Student to Manager or return a Manager to Student. The public sign-up page cannot create an Admin account."

Scene-by-scene recording plan

13. Activity and live connection panel | 8:40-9:15

SPEAKER: ADMIN

ON SCREEN

Show the Admin activity page, then return to the live connection panel. Point out role and broad screen name without showing private content.

NARRATION

"The activity page records events such as account registration, sign-in, friend requests, and message counts. The live connection panel shows users who connected recently and the broad app section they opened. It does not record private message text or every tap. These views help the project Admin check account and system activity while respecting private conversations."

14. Closing message | 9:15-9:40

SPEAKER: ADMIN

ON SCREEN

Show a short collage of Student, Manager and Admin pages, then close with the StudyMate logo and project title.

NARRATION

"StudyMate gives students tools to plan and practise, helps managers organize class activities, and gives admins a clear system overview. It brings everyday study work into one mobile-friendly app. Thank you for watching our StudyMate demonstration."

Final recording check

Keep the total between 9 and 10 minutes. Record each role with its own verified account. Show the app responding to each action, use readable screen zoom, and keep the narration easy to hear. Pause briefly between sections so the video does not feel rushed.

Full narration - read-through

Read calmly. This version follows the time-coded scenes in the previous pages.

"Think about a normal study week. A student has notes in one place, assignments in another, and reminders on a phone. Teachers need to know who has submitted work. Administrators need a clear view of the system. StudyMate brings these study tools together in one mobile-friendly app."

"StudyMate is a smart student assistant for learning and course management. It has three roles. Students use it to study and track their work. Managers, such as teachers, organize course activities. Admins review accounts and system activity. Each role sees its own workspace. In this video, I will show how the three roles use one connected app."

"A new user can register with a name, email, department, batch, institution, and password. The user confirms the email before signing in. For safety, a new account starts as a Student. The project owner assigns the first Admin. After that, the Admin can promote a verified Student to Manager from the account list. This keeps role access under control."

"Now let us look at the Student dashboard. The student can move between Home, Routine, Planner, Progress, Friends, and Profile. The dashboard gives a quick view of study activities. The Profile page holds the student details and notification preferences. A student can add a profile photo and choose whether to receive friend requests. The layout is designed to be clear on a phone."

"Course materials are available in one place. A student can open a resource and see which course it belongs to. This helps students find notes and study guides without searching through multiple chats or folders. Managers add these resources for the class. When a new resource is published, students can open it from their study materials area."

"Assignments help students understand what work is due and what they need to submit. The student opens an assignment, reads the instructions, writes a response, and submits it. Next, the student opens a practice quiz and answers each question. The app records the attempt and displays the score. These activities give students a simple way to practise and show their work."

"Students can use the Planner to add a task and keep study work organized. The Focus timer lets the student choose a session length, then start a focused study block. When the session ends, the student can take a break and begin another one. On the Progress page, students can review submitted assignments and quiz results. These tools help students plan, focus, and notice what they have completed."

Full narration - continued

Continue from the previous page. Leave short pauses while the app screens change.

"Students can find classmates who use the same institution name. They can send a friend request, accept or decline requests, and choose to turn off incoming requests. Private chat is available after a friendship is accepted. This gives students a way to connect while keeping each user in control of who can contact them."

"The Manager has a separate workspace for course tools. The dashboard summarizes student accounts and course activity, including materials, assignments, submissions, quizzes, and quiz attempts. A teacher can use this view to understand what has been published and whether students are taking part. Now I will show how a Manager adds course content."

"A Manager can publish course materials with a title, course, type, and description. The Manager can create an assignment, add instructions, and set a due date. A quiz can include questions, answer options, and the correct answer. The Manager can also send an announcement to students. These tools keep the main course activities together in the same app."

"The Manager can review student progress from the progress page. It shows assignment submissions and quiz activity, including scores. This helps a teacher spot who has completed work and who may need more support. For the demo, use sample accounts and sample course data so no real student information appears in the recording."

"The Admin workspace gives an overview of accounts and recent system activity. The account list groups profiles by role and can be searched by name, email, institution, or role. The Admin can send a private notice to a selected account. The Admin can also promote a verified Student to Manager or return a Manager to Student. The public sign-up page cannot create an Admin account."

"The activity page records events such as account registration, sign-in, friend requests, and message counts. The live connection panel shows users who connected recently and the broad app section they opened. It does not record private message text or every tap. These views help the project Admin check account and system activity while respecting private conversations."

"StudyMate gives students tools to plan and practise, helps managers organize class activities, and gives admins a clear system overview. It brings everyday study work into one mobile-friendly app. Thank you for watching our StudyMate demonstration."

Accuracy reminder: The live panel shows a recent connection and broad app section, not every action. The built-in Study Assistant does not call a live AI model in this build.
